

FRESHLO, A One Stop Fresh Vegetables and Fruit Site

[Deployed site: <https://fresh-aaj.pages.dev/>]

There are a lot of features that I have added into this website;

1. Navbar Section

- Which includes the title of the application in the left most.
- Nav bar menu section in the middle and search box, cart option and user login button in the right most
- Also the right most icons such as search, cart, user login are working that means If I click on the cart button, the cart section will appear on the screen. Same with the search box and use login as well.

2. Hero Section

- Where I have designed a beautiful home page in this section.

3. Categories Section

- Where just to let the customer know about the product availability and branding itself has been promoted and has been given some hover effect also.

4. Product Section

- Where I have used swiper js cdn for the slider to make sliding property to the product section, so it supports infinite horizontal scrolling.

5. About Us

- Where I have described that what the brand is for and how it is trusted by the people

6. Subscribe

- This has been made for the customer to subscribe the company's newsletter.

7. Footer

- Copyright section has been done

Basically I have put all the effort to make the design coding within 1 day. But I make sure that If I would get some time like 3-4days, I would have done much more than this as I know how good I am at designing and developing the website.

I hope You will definitely like the webpage.
